When using these products in stainless steel water systems, dielectric unions must be used on each end to prevent leakage from galvanic action.

INSTALLATION:

1. Thoroughly clean male and female ends using steel wool and steel brushes.
2. Nitrogen purge- flux not permitted.
3. Wrap base of copper fitting on connector and 2" (51mm) of the braid with a wet cloth to prevent overheating during soldering.
4. Direct the torch away from the base of the copper fitting and braided section. Avoid contact of the flame with the base of the copper fitting and braid. Heat end of copper fitting for proper flow of braze.
5. Use caution with brazing rod or other higher temperature techniques. Overheating will cause leaks.
6. Remove wet cloth immediately after installation.

RATED MOVEMENTS

±4" (102mm) All Directional Seismic Movement
±6" (152mm) Guided Thermal Movement Only

Vacuum rating varies with size and application.
Consult factory on all vacuum applications.
